

An **exchange** with a **French school** on the topic of **sustainable development?**

Let's give it a go!

Our school in
the French Alps

Our living
environment

The teachers involved in the project

Morgane : Science teacher

Elodie : English teacher

Lucie : Italian teacher

Our project in Grade 9

From Grade 6 to Grade 9, we are working on the topic of sustainable development with a special class in French, English and Italian language. We also work with science teachers.

From the creation of an eco-friendly citizen handbook in Grade 6 to the design of the ideal eco-city model in Grade 9, we are looking for innovative sustainability experiences around the world (we went to the UK in 2017-2018 and we're going to Sicily in 2018-2019).

We are looking for partners (teachers and students), interested in participating in a school exchange to discuss and share our ideas, achievements and projects in English, French (and even in Italian!) and to **build together a way to a greener and happier future!**

We live in a small town surrounded by mountains, and we would be interested in discovering what you do to protect the environment in Canada, in your school as well as in your city.

We would like to start this exchange with by corresponding with you using a method of communication that is convenient for you (e.g. letters, e-mails, Skype...) to get to know one another before meeting.

We are planning this exchange to take place in the school year 2021-2022
